

## Sustainability Education (D31-2402)

### Course Description

Transform your teaching with sustainability education: Dive into innovative, effective strategies for sustainability education and become a pioneer in fostering sustainable futures in higher education.

The goal of this self-learning course is to equip you as an university instructor with a solid understanding of sustainability education and empower you to rethink and redesign your own courses in higher education. With Sustainability Education, we accompany your journey to foster sustainability in teaching and learning.

This self-paced multimedia web-based training offers you two modules to choose from based on your prior knowledge and goals.

- Module 1 covers the basics of sustainability (education). You will learn about its relevance and meaning for society and for higher education institutions.
- Module 2 offers you a hands-on design challenge for embedding sustainability into your teaching. In this module you jump right into action

Dive into the self-learning course and harness effective teaching strategies tailored for sustainability education.
